In the last episode of this blog series we learned about the overall concepts of input methods in Qt, with a look behind the scenes to see how a key press event from the native windowing system travels through the Qt input stack until it appears on screen inside a QLineEdit. In that context, the input method was used to allow the user to modify the input (e.g. composing a Chinese character ...

A method in object-oriented programming (OOP) is a procedure associated with a message and an object. An object is mostly made up of data and behavior, which form the interface that an object presents to the outside world. Data is represented as properties of the object and behavior as methods. For example, a Window object would have methods such as open and close, while its state (whether it ...

`net.sf.jasperreports.allow.element.negative.width`: A property that determines whether elements having negative width values are allowed. If this value is set to false, the report is verified not to contain elements with negative width values. This is useful when the report is meant to be exported to grid-based formats such as HTML, XLS or CSV, which might enter an infinite loop.
